Can you always find what you want to find on the internet? These are tips that will help you to become a safe and smart searcher!

- Several keywords will help to find better results. Use more than one keyword when you are doing a search. If you want to find out about roses for example, search for 'flower rose' and not just 'rose' – because rose might be the name of just about anything else, from a hotel to a love story.
- If you are looking for an exact phrase or sentence, like 'roses are very beautiful', type it between inverted commas ("") and only exact matches will be shown. This is useful when you want to find something you have already seen but lost.
- Avoid common words like 'the' or 'a' in a search. These aren't always helpful and are usually unnecessary.
- Remove unwanted results by adding a minus symbol (-). For example, 'rose -hotel -story' would leave out all references to hotels and stories.
- Check your spelling. Make sure that you spell every word in the search box correctly. The smallest typing mistakes can bring unwanted results – especially when the mistyped word exists.
- Have a filter. It's a good idea to filter your online searches, especially when you are searching for pictures. Ask an adult to help you add a filtering system. There are lots of filtering software options available.

Check true (T) or false (F).

49. ----- You should only use one keyword in a single search.
50. ----- Small spelling mistakes aren't important.

Write 'Use' or 'Don't use' to complete the tips.
